## XV.—METEOROLOGICAL STATISTICS.

(Supplied by the Commonwealth Meteorologist, Mr. W. S. Watt.)

No. 41.—Notes on the Rainfall and general weather conditions in Western Australia during the months of April, May and June, 1936.

*April.*—April rainfall in this State was accounted for almost entirely by three rainstorms, which presented many opposing features on the isobaric chart. The first set in on the Darwin coast and extended to the East Kimberley, the northern portion of that area adjacent to the Northern Territory receiving the heaviest gaugings. The second was the result of a southern disturbance on to the Leeuwin. This swept through the South-West and the Great Southern with good results, and although at many places it was not heavy enough to put much water in the dams, it sufficed for household purposes, whilst it enabled the cultivation of fallow and the sowing of oats and other feed crops. It unfortunately missed the main wheat belt and there water carting still continued, while the ground remained too hard for cultivation. The third rainstorm was of tropical origin and first affected the coastal portion of the Fortescue on the 17th and extended during the following few days throughout the greater part of the sub-tropical portion of the State. Unfortunately, owing to the high barometers, the West Gascoyne and the northern portion of the Midland country were the only divisions to reap any substantial benefits, the remaining portion only receiving very light falls.

Despite the heavier rains in the sections referred to, only a few stations outside the West Gascoyne showed totals above the usual April fall, and the greater part of the State was below the average, the rainfall at the majority of stations in the West Kimberley, North-West, Pilbara, Ashburton, East Gascoyne and the goldfields being negligible.

Temperatures were about equal to the average in sub-tropical districts and no excessively high day temperatures were encountered, although the maxima registered in Perth during the last two days constituted a record at the Observatory for the period.

No rough weather was reported from any coastal stations, but vessels running eastward towards Tasmania and far down in the Bight encountered on occasions westerly gales.

*May.*—The month of May was characterised by the activity of rain-bearing depressions which commenced to affect the State at an early date. The influence of these disturbances was most pronounced on the coast, through the fruit and dairying country and in the southern wheat belt, but at only a few centres were the monthly averages surpassed.

The figures for Perth were 543 points, falling on 15 days, or 33 points above the normal, the only station in the metropolitan area to show an excess.

Turning to inland districts, we find a steady diminution in rainfall with distance from the coast until at Mukinbudin, a typical station in the north-eastern section, the total was only 57 points falling on four days and 87 points under the average. Other stations in the north-eastern and eastern divisions also received light falls, but at other agricultural centres the falls were decidedly better, ranging in general between one and two inches, but still below the average.

In the Gascoyne and Goldfields the rainfall was confined to trivial showers, while in the tropics nothing beyond a very light shower in the East Kimberley was noted.

Temperature figures revealed no remarkable features, either in means or extremes, although some decidedly low night readings were disclosed towards the end of the month, when severe frosts were reported.

Very rough southerly weather was experienced on the coast between Perth and Albany and through portion of the country districts on the 21st in connection with a cyclonic depression and considerable damage was caused in the metropolitan area.

*June.*—A glance through the weather charts showed that both highs and lows were well formed and as a result a regular alternation of wet and dry periods was experienced throughout the month.

The most vigorous rainstorm occurred on the opening days of the month and was accompanied by strong north-west to west gales which hampered shipping and caused some damage to coastal and country centres. The rain was very heavy on the coast, reaching three or four inches at some centres, while heavy falls were recorded throughout the wheat belt, including the east and north-eastern areas which have suffered most from the long, dry summer. Falls from an inch to two inches were recorded in these two divisions and at some sections it was the heaviest 24 hour rain ever recorded. Dams were overflowing and a considerable amount of country was flooded.

Other noticeable falls occurred on the 7th, 9th, 18th and between the 24th and 30th, but the registrations, except on the 7th, fell away considerably in the eastern and north-eastern portions of the wheat belt.

The rains also extended on several days to the Gascoyne, Murchison and the goldfields, the most consistent occurring on the 3rd, 26th and 27th, and totals for the month ranged from 30 to 160 points, which, although under the average, will have done an immense amount of good.

In the northern portions of the wheat belt the registrations were all below normal, particularly between Mullewa and Buntine and through the Three Springs-Carnamah country, but on the coast, throughout the southern agricultural districts and the Avon Valley the monthly totals were mostly over average, the excesses being greater in the southern portion of the wheat belt.

The fine intervals were marked by cold nights and severe frosts with drying easterly winds, but on the whole both day and night temperatures were about equal to the usual figures met with in June.

Heavy coastal weather was prevalent. In Perth the stormiest day was the 2nd, when a total wind mileage of 693 miles was registered. The maximum hourly run of 43 miles was shown at 5 a.m., but momentary velocities of 55 miles were indicated.

## XVIII.—MID-MONTHLY EMPLOYMENT IN WESTERN AUSTRALIAN FACTORIES

No. 52.—Index numbers representing the Trend of Employment in Factories and Works compiled on the basis of monthly returns specially collected from establishments which together furnish approximately 36 per cent. of the total employment in Secondary Industries.

The Annual Mean Employment for the year 1929-30 has been taken as a base equalling 100. The index number for 1930-31 fell to 77. The indices in the table hereunder show the fluctuations in the Number of Employees on the Pay Roll on or about the 15th day of each month, from July, 1931, to June, 1936.

Year.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
1931 ... ..	...	...	...	...	...	...	66	64	65	66	68	69
